

Patent Consent and Disclosure Policy

Journal of AI Production and Consumption (jAlpc)

1. Policy Purpose

The Journal of AI Production and Consumption (jAlpc) is committed to publishing high-quality, original research in the field of artificial intelligence. Given the commercially sensitive and rapidly evolving nature of AI, this policy aims to:

Protect the patentability of authors' inventions.

Manage conflicts between public disclosure (through publication) and patent law.

Ensure transparency for readers and the scholarly community.

Shield the journal from potential legal liability.

2. Author Disclosure Requirement

Upon submission, all authors are required to disclose any existing patents, pending patent applications, or intention to file a patent that is directly related to the research presented in the manuscript.

3. Authors' Warranty and Consent

By submitting the manuscript, the author(s) warrant and agree that:

They have reviewed this Patent Policy.

They understand that public disclosure of an invention in a journal article may invalidate the right to obtain patent protection in many countries, which often require absolute novelty.

They are solely responsible for securing any necessary patent protection **prior to** the publication of their manuscript.

They have obtained explicit permission from any involved entity (e.g., their employer, funding agency, technology transfer office) to submit the manuscript for publication.

They consent to jAlpc's publication process and understand that once an article is published online, it constitutes a permanent, public disclosure.

4. Journal Policy on Timing and Embargo

No Delays for Patent Filing: jAlpc **will not** delay its scheduled publication date to accommodate the filing of a patent application. The publication schedule is fixed upon acceptance.

Pre-Publication Embargo: All manuscripts are considered confidential until the moment of publication. This pre-publication period can be used by authors to complete their patent filing process.

5. Recommended Author Workflow

To avoid loss of patent rights, jAlpc strongly advises authors to follow this sequence:

Complete the invention.

File a provisional or full patent application with the relevant national or international patent offices (e.g., USPTO, EPO, WIPO under the PCT).

Once a filing date is secured, submit the manuscript to jAlpc.

Authors should consult with their institution's technology transfer or intellectual property office before submission.

6. Disclaimer of Liability

The Journal of AI Production and Consumption, its editors, publishers, and affiliates:

Shall not be held liable for any loss of patent rights resulting from the publication of a manuscript.

Assume no responsibility for determining the patentability of any research presented.

Provide this policy as guidance only, and do not offer legal advice.

7. Publication Statement

To maintain transparency, the journal may publish the following statement on articles where relevant:

"The authors confirm that they have, where appropriate, secured the necessary patent protection prior to publication."

8. Contact

For questions regarding this policy, authors should contact the editorial office. For legal advice regarding patents, authors must consult with a qualified intellectual property attorney.
